Drawing not
to scale

This tool is a draw scraper.

I need metal that can be heat treated
for final sharpening of the edge

The sides have to be parallel & 90°
angles to make it easy to sharpen
with a jig.

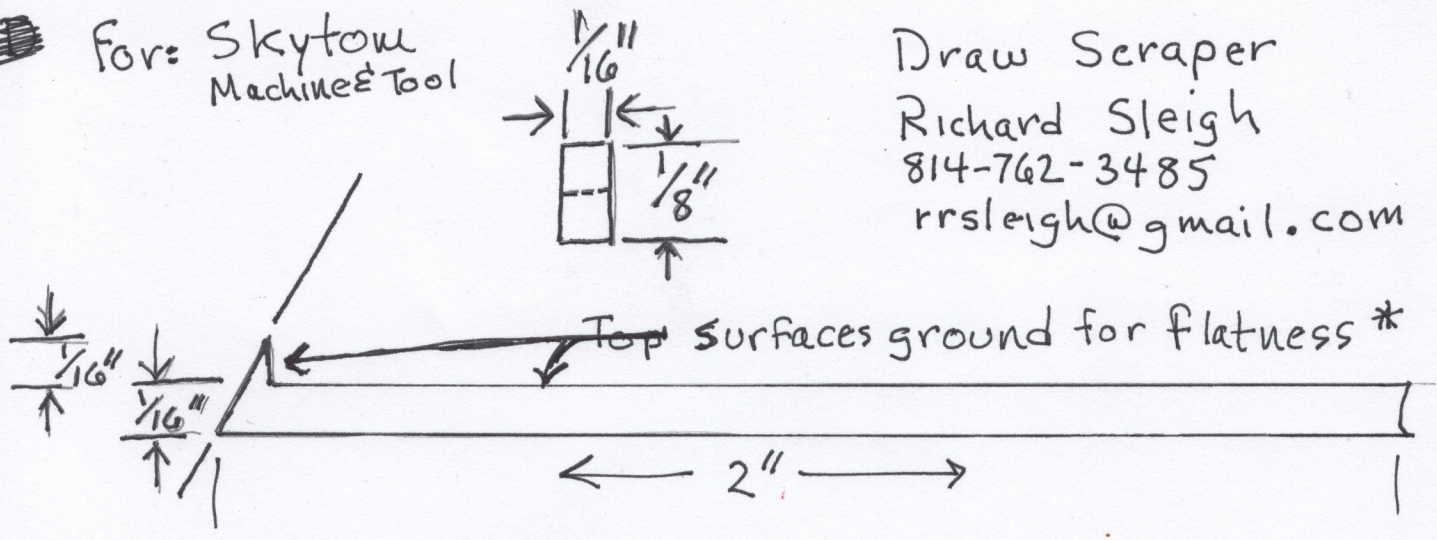

I need estimates For 100, 250 & 250-500

- The closer you can get to parallel sides the better.
- *You ground the area leading up to the cutting surface ~~of~~ inside edge of the cutting surface
- Heat ~~treated~~ treated

I would like estimates for 100 & 200
Thanks!
